

A CASE FOR CHANGE:

THE 6400 PORTABLE ANALYZER

Why Windrock customers are quickly moving to this innovative upgrade from the 6320.

Technology is constantly changing, evolving, becoming more efficient, reliable and safe.

That doesn't mean that existing technology is "bad," or no longer has any use. It often means that the proven technology is now the foundation for a new-and-improved version. Think about it – do you know anyone who is still using an iPhone 1? Or even 3?

We are undeniably proud of our Model 6320 Portable Analyzers. In the decade since the 6320's release, it has revolutionized the industry and set a new standard in analyzing the performance of critical reciprocating machinery and rotating equipment.

But time marches on. The speed of innovation is relentless...and yet, normal. It is expected that technology companies like Windrock retire older products and unveil new ones that can better serve the changing needs of Industry. It's not a cliché – to stand still is to fall behind.

Technology component suppliers make tough choices regarding which parts they will obsolete, and they have chosen to discontinue production of many 6320 components, which makes it difficult for us to support them. This is not a cause for concern, but an opportunity for measurable, profitable improvement!

The 6400 Portable Analyzer is compatible with **Windrock Enterprise**, our game-changing IIOT solution.

6400 IMPROVEMENTS

- Smaller, Lighter, Easier to Transport
- New Daylight-Readable Screen
- Communicates Wirelessly to the Cloud
- Integrated Bluetooth® and Wi-Fi
- Fastest Processor in the Industry
- Integrated Encoder and Wireless Transmitter

WHAT IT MEANS FOR YOU

Speed and Safety: Less time on hot equipment

Efficiency: Integration of Encoder & Wireless Transmitter and Ultrasonic and Temperature Sensors reduce analysis time by up to 30%

Intelligence: More data reported FASTER, more accurately

Mobility: Connects to **Windrock Enterprise** for instant insights, accessed from any device, anywhere in the world, across your entire fleet of assets

MEET THE MODEL 6400!

The new **Model 6400 Portable Analyzer** is an improved, updated, more technically robust version of the established 6320. It takes the best qualities of the 6320 and builds on them, resulting in a portable analyzer that can deliver innovative benefits in a lighter, more compact, more powerful device.

More Robust Features

- Streamlined design – only one carrying case, not two, needed to house analyzer
- Brighter screen is easier to read in the field, even in direct sunlight
- Multi-channel wireless encoder reduces interference from nearby devices
- Built-in Wi-Fi and Bluetooth® capability for wireless data communication
- Infrared and ultrasonic sensors combined in one probe for faster data gathering
- Easy-to-read battery power gauge
- Communicates through “virtual” monitoring with the Windrock Enterprise IIOT platform

Increased Efficiency & Speed

- Monitors multiple data points simultaneously
- More effectively predicts when maintenance may be required
- Helps meet operator demands for 1:1 flow-balance rates
- Collects and analyzes data faster
- Lowers analyst on-site time, which optimizes cost-effectiveness for the client

Superior Operation Safety

- Reduces analyst time on the machine deck, which lessens risk of accidents
- Integrated sensors reduce cumbersome wires
- Lightweight and compact ergonomic design

KEEP YOUR ENTERPRISE IN MIND, FROM WHEREVER YOU ARE.

From any computer or mobile device in the world, your enterprise stakeholders can securely connect to a modern and intuitive dashboard where you can analyze trends and gain immediate insights about the health of your assets.
