
KINDER MORGAN CORPORATION MEMORANDUM

TO: NICHOLAS WIEDEMANN
FROM: JOSEPH SIMONSEN
SUBJECT: WINDROCK AUTOBALANCE SYSTEM – WILLIAMS ARIZONA COMPRESSOR STATION
DATE: 2/8/2013

The Kinder Morgan Compressor Station located east of Williams Arizona currently utilizes the Windrock Autobalance system to ensure efficient operation of our natural gas fired reciprocating unit. This system was installed in 2010 and has improved the operation of the facility since the first day in operation.

The autobalance system provides real-time monitoring and adjustment of the unit's performance using the Windrock technology. We have been very pleased with its performance and durability during the time we have had the unit. Kinder Morgan has seen a decrease in failures and replacement of liners and cylinder heads because of the performance on this unit.

Kinder Morgan is pleased to recommend this product for your purchase. We were pleased to be part of the site visit from employees from your company and welcome future interaction. If you have any questions please feel free to contact me at the email or number below.
