

**2019 Users' Group  
Windrock Summit Award**

**Apergy™**

# Increased Productivity Through Technology

Technologies such as cloud based monitoring systems, artificial intelligence, pattern recognition, drones, virtual reality, IoT, block chain, etc. are becoming a popular subject in the oil and gas industry. Windrock is continuously striving to innovate and introduce new technology into the market to solve customer problems. This year we want to investigate how companies are incorporating new technology into their processes. Please submit a case study or presentation on how your company has used technology to increase productivity.

# Outline

- Company Overview
- New technology overview
- Increased productivity case study
- Management of change
- Conclusion
